

A person wearing a white winter jacket with a fur-lined hood, black pants, and black boots is sitting on a snowy mountain peak. The person is looking out over a vast, snow-covered mountain range under a clear blue sky. The image is part of a catalog cover, with a decorative white diagonal line on the right side and a black banner at the bottom right containing the title and year.

REAL-WORLD TESTED™ COLD COMFORT RATINGS

One of Baffin's main points of difference is our real-world testing and the stories that are ready to be told. Our goal is to use the Real-World Tested™ (RWT™) level evolution as a vehicle to bridging the gap between product and application. RWT™ acts as a catalyst for the sharing of these stories, experienced internally and by customers alike. RWT™ is a system which helps to recommend comfort levels associated with Baffin footwear. Alongside thermal testing in labs, each rating has been determined by extensive use of Baffin product in real-world application on expeditions

and jobsites around the world. Alongside our ambassadors and end-users, we test all product ourselves by putting on our footwear and heading into the elements. Each rating is associated with a suggested level of activity* for remaining comfortable by regulating temperature in diverse and challenging environments.

**Activity levels may be influenced by several factors and are unique to everyone. Please consult a medical professional if you're planning to be active in freezing temperatures – please see page 73 for more information.*

POLAR RATED: For the coldest conditions on Earth. Comfort is best achieved with moderate levels of activity and has been Polar Proven® by us at both the North and South Poles, ensuring durability and protection in the coldest environments in existence. Polar Rated products have been worn by Baffin's testing team in comfort in regions where temperatures between -45°C to -60°F/-49°C/-76°F have been experienced.

ARCTIC RATED: For active endeavours when freezing temperatures are sustained for extended periods. Comfort is best achieved with moderate to high levels of activity and has been proven by us on treks to Baffin Island and on industrial worksites across the Arctic, ensuring performance in extreme-cold conditions. Arctic Rated products have been worn by Baffin's testing team in comfort in Arctic regions where temperatures between -30°C to -45°C/-22°F to -49°F have been experienced.

TUNDRA RATED: For work and play in snow-covered environments. Comfort is best achieved with moderate to high levels of activity and has been proven by us at latitudes and altitudes during Canadian winters ensuring durability and protection in the snow. Tundra Rated products have been worn by Baffin's testing team in comfort in tundra regions where temperatures between -10°C to -30°C/14°F to -22°F have been experienced.

NORTHERN RATED: For the most diverse experiences, where both wet or icy conditions may be present. Comfort is best achieved with moderate activity and has been proven by us from rivers to glaciers and jobsites across the North ensuring a dry and surefooted experience. Northern Rated products have been worn by Baffin's testing team in comfort in northern regions where temperatures between 10°C to -10°C/50°F to 14°F have been experienced.

ELEMENTAL RATED: Foundational and functional performance for a purpose driven lifestyle. Comfort is best achieved with light activity and has been proven by us travelling the Great Lakes and maintaining parks and city streets ensuring protection from challenging elements. Elemental Rated products have been worn by Baffin's testing team in comfort in environments where temperatures 10°C+/50°F have been experienced.

1979: BORN IN THE NORTH

Where it all begins. Peter Hubner begins production on his first moulding machines in Stoney Creek, Canada.

1982: FOR FAMILIES

Baffin expands product line to offer specific lasts for women's and children's feet.

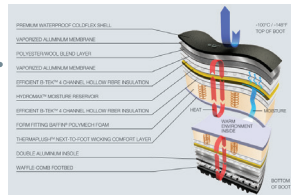

1985: INSULATING THE BOOTS

Inspired by the Inuit's layering approach to warmth, multi-component felt liners are developed.

1996: AS WARM AS IT GETS

The signature "Inner-Boot System" is born, allowing Baffin boots to perform in -70°C temperatures (and colder!)

2006: POLAR PROVEN®

Paul Hubner wears his boots to the North and South Poles, Proven Performance® in extreme environments.

2011: INTRODUCING APPAREL

The Hubner Family crosses the Arctic Circle head-to-toe in Baffin footwear and apparel.

2018: LAKE EFFECT EXPEDITION

Mark Hubner continues the family legacy by leading a cycling expedition joined by brother, Brent, around Lake Ontario; tests new product in extreme Canadian Winter conditions.

2018: BAFFIN JOINS CANADA GOOSE HOLDINGS INC.

Baffin joins Canada Goose Holdings Inc. and both brands look forward to a stronger future, working toward continued innovation in protection from extreme elements.

A LETTER FROM PAUL

For decades, Baffin has been defined by relentless innovation, uncompromising quality, and the belief that performance should never be limited by the elements, or the demands of the job. Year after year, we've stood alongside you on icy worksites, in frigid temperatures, and through the most challenging industrial environments.

We design work footwear that performs where it matters most: on real ground, in real weather, and in the toughest conditions, where safety, warmth, and protection are non-negotiable. From frozen job sites in the North to unpredictable winter conditions closer to home, our boots are tested in the same environments you work in, because performance isn't just a promise, it's our standard.

This season, we continue to build on that legacy, refining our technologies, advancing our offerings, and engineering boots that combine durability, comfort, and cold-weather protection in equal measure. Whether you're navigating slick steel surfaces, braving sub-zero winds, or working long hours in unpredictable weather, our Industrial Collection is built to endure.

President

INSULATION

Removable Active-Fit multi-layer inner boot system, with body-heat mouldable technology providing personalized performance and fit featuring:

- Thermawick™ comfortable, hi-wick next-to-foot lining material for greater breathability and improved thermal regulations
- Form-fitting **B-Tek™** Foam lining for comfort
- **B-Tek™** Lite proprietary aero-insulation blend that allows the inner boot to achieve greater thermal regulation while using less material
- **B-Tek™** Heat lightweight, 4-channel hollow-fibre insulation for high-loft breathability in a broad range of temperatures
- PolyNylon™ blend used as an outer layer for lightweight and breathable liner durability
- DiamondNet™ insulation for wind-resistant protection with a lightweight feel
- Polyurethane footbed for additional support and thermal resistance

UPPER

- Mid-height, oil and acid resistant premium leather and nylon upper, laces and stitching
- **B-Tek™** SaltShield repels salt to protect, preserve, and clean easily
- Rust-resistant easy pull eyelets for secure fit
- Pull loops at front and back for ease of entry

BASE

- Composite Safety Toe and Plate
- IceBite® for greater slip resistance on ice than conventional rubber
- Oil and acid resistant Polyurethane (PU) base and rubber outsole
- Tested in accordance to Z195-14 for Coefficient of Friction (COF) on Quarry tile/stainless steel/wet and dry surfaces, at room temperature and cold climate conditions

MULTI-LAYER INNER BOOT SYSTEM

Baffin's expertise in the technical essentials of a boot to protect from diverse climates and suit any outdoor adventure has produced a varied line of products that offer foundational support specifically for a customer's needs. This specialized approach to cold-climate footwear extends to Baffin's multi-layer inner boot systems, an offering of four distinct insulation solutions made to offer the best temperature protection based on application.

Combining Baffin's proprietary technology, including B-Tek™ Heat Insulation, B-Tek™ Foam, Thermaplush™ and Hydromax™, with high-quality materials, the multi-layer inner boot systems offer a wide range of temperature protection to keep you warm in the most extreme conditions.

As Baffin offers a wide range of temperature protection, each series has a unique combination of these layers – sometimes doubling up where needed – to keep you warm in the most extreme conditions.

DESIGNED FOR EXTREME USE

Baffin Technologies:

Arctic Rubber™: This proprietary Thermoplastic Rubber (TR) synthetic blend is our choice compound for base shells. Baffin's Arctic Rubber™ provides ultimate protection from the elements – striking a calculated balance between lightweight flexibility, cold resistance and resilience.

DiamondNet™: Insulation for wind-resistant protection with a lightweight feel.

GelFlex™: This compound maintains high flexibility even in cold temperatures. When used in midsoles, GelFlex™ helps with shock absorption and rebounding which ensures more boot to surface contact.

Hex-Flex®: Baffin's proven outsole design for slip resistance.

Hydromax™: Layering for improved moisture management.

ICEBITE®: With greater slip resistance in icy conditions than conventional rubber, Baffin's IceBite® compound is a leader in maximum grip. Oil and acid-resistant, and now with enhanced rubber softness for improved slip-resistance, IceBite® is the latest evolution of Baffin's established and proven compound. Bite the ice, with the coarse grit of IceBite®.

Polar Rubber™: Baffin's Polar Rubber™ blend has been developed to be more durable, lightweight and remain more flexible than traditional vulcanized rubbers at cold temperature. This results in a softer rubber to maximize grip on snow and ice – without compromising resistance to abrasion and wear.

PolyWick™: Lining for moisture transfer and evaporation outside of fabric.

PolyWool™: Polyester wool blend for breathable warmth.

Thermaplush™: Baffin's soft, next-to-foot wicking layer for warmth and comfort.

Thermawick™: Comfortable hi-wick next-to-foot lining material for greater breathability and improved thermal regulation.

UltraFlex™: Oil and acid resistant compound for added abrasion and caustic resistance.

DESIGNED FOR EXTREME COLD

B-Tek™ Proprietary Technologies:

B-Tek™ Foam: Form-fitting lining for comfort.

B-Tek™ Heat: A lightweight, 4-channel hollow-fibre insulation for high-loft breathability in a broad range of temperatures.

B-Tek™ Insulation: For foundational warmth.

B-Tek™ Lite: Proprietary aero-insulation blend that allows the inner boot to achieve greater thermal regulation while using less material.

B-Tek™ SaltShield: A protective technology that repels salt to preserve materials, reduce staining, and allow for easier cleaning.

B-Tek™ Scent-Free: Next-to-foot lining for keeping odours at bay.

B-Tek™ Dry Waterproof Classes:

B-Tek™ Dry Waterproof: An impervious to water technology, offering the maximum class of wet protection. This category of advanced waterproofing provides water guard in the wettest of conditions – allowing for full submergence where needed. Products in the B-Tek™ Dry Waterproof classification are waterproof from the base through to the collar and protect from wetness at depths for extended periods of time.

B-Tek™ Dry Waterproof Breathable: A powerful waterproof technology, offering high wet protection with increased breathability. This category of advanced waterproofing is intentionally breathable for outdoor activity, where elements such as rain and melting snow are present and welcome. Products in the B-Tek™ Dry Waterproof Breathable classification are waterproof from the base to the collar and protect from wetness, while supporting comfortable movement.

B-Tek™ Dry Waterproof Base: Waterproof technology, offering the maximum class of wet protection to the stitch line. This category of waterproofing ensures that your footwear is purpose-driven – keeping you dry where the snow may melt, and providing thermal regulation where breathability is needed. Products in the B-Tek™ Dry Waterproof Base classification are waterproof from the base up until the stitch line.

B-Tek™ Dry Water Resistant: Fundamental waterproofing technology, able to resist the penetration of water. This category of waterproofing allows for outdoor action in hybrid designs – extending use and functionality. Product in the B-Tek™ Dry Water Resistant classification offers wet protection during brief exposure through the unexpected weather changes of all seasons.

LEVELS OF ACTIVITY

HIGH LEVELS OF ACTIVITY: Moderate to high levels of activity are achieved when a user's heart rate is between 55% and 79% of their heart rate max. Examples of this type of activity may include winter expeditions, snowmobiling, cross-country skiing, etc.

MODERATE LEVEL OF ACTIVITY: Moderate levels of activity may be achieved when a user's heart rate is between 55% and 69% of their heart rate max. Examples of this type of activity may include viewing the northern lights, climate research, ice fishing, etc.

LIGHT LEVEL OF ACTIVITY: Light levels of activity are achieved when a user's heart rate is between 45% and 60% of their heart rate max. Examples of this type of activity may include camping, foraging, fishing, etc.

**As warmth may be affected by many factors, please consult a medical professional if you're planning to be active in freezing temperatures.*

Baffin is an innovative, leading outerwear company based in Stoney Creek, Ontario, Canada. Baffin's core focus is technically advanced footwear and high-performance apparel.

At Baffin, we believe that product testing shouldn't end in a factory or lab – taking our footwear and apparel to the most extreme environments on the planet for performance testing.

Baffin is focused on becoming the global leader in footwear and apparel within the Outdoor, Industrial and Hunt and Fish categories.

Baffin is a wholly-owned subsidiary of Canada Goose Holdings Inc.
